

EcoRAID™

Small VMware Bundle

VM-1000

**EcoServer™ and EcoRAID Storage Solution
Supports 16 to 48 Virtual Servers**

With a complete *Small VMware Bundle*, assembling a VMware hardware infrastructure has never been easier. With a single solution you can deploy the servers and storage you need from a single vendor with optional cabinet, UPS, switches and services configured to order. All hardware is supported under a single warranty and service contract. This eliminates the finger pointing often found in self-integrated hardware solutions.

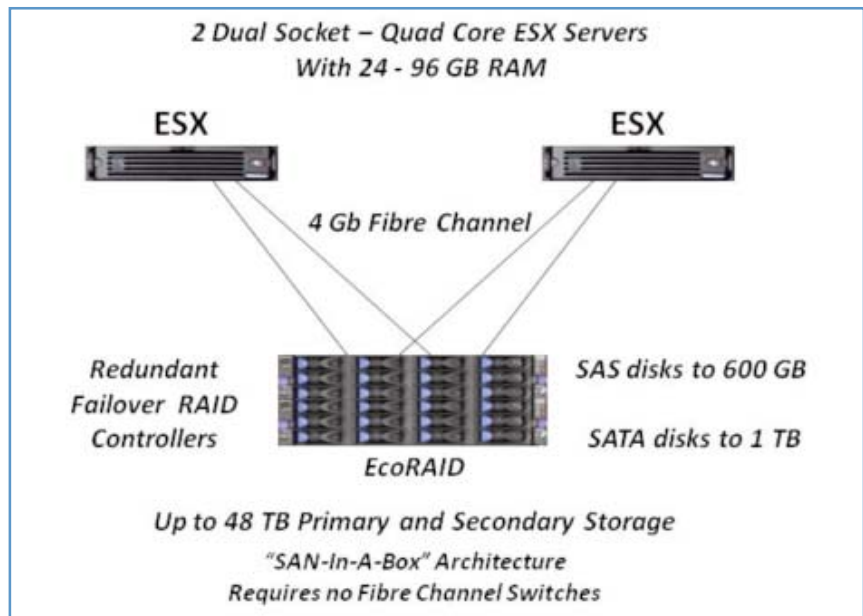

Shown here are two EcoServers running ESX on eight cores each, an EcoRAID base unit and one expansion shelf. This *Small VMware Bundle* supports up to 48 virtual servers, with three virtual servers per processor, and up to 48 TB of storage with three expansion shelves. The *Small VMware Bundle* shown provides up to 24 TB of storage and uses only 12U of rack space in a 42U cabinet including the two UPS systems.

Each EcoServer has eight processors with 24 GB RAM expandable to 96 GB. The EcoRAID disk array supports both primary storage using high speed SAS drives with 10k and 15k rpm performance for high speed applications including database, OLTP, manufacturing and financial, plus secondary storage with high capacity SATA disks to 1 TB each for snapshots, archive, backup, disaster recovery and other bulk storage applications.

Finally, the total solution is simple, affordably priced - and ready to install.

Small VMware Bundle Configuration

The *Small VMware Bundle* is a complete and affordable VMware infrastructure available in a special EcoCabinet™ with high efficiency and eco-friendly servers, storage and UPS - and fits in four sq. ft.

This *Small VMware Bundle* is configured with two affordable and reliable EcoServers to run ESX and supports 48 virtual servers and up to 48 TB of EcoRAID SAS and SATA storage.
