

FlashDisk® Large VMware Bundle VM-3000

EcoServer™ and FlashDisk Storage Solution Supports 64 to 192 Virtual Servers

With this complete *Large VMware Bundle*, assembling a VMware hardware infrastructure has never been easier. With a single solution you can deploy the servers and storage you need from a single vendor with optional cabinet, UPS, switches and services configured to order. All hardware is supported under a single warranty and service contract. This eliminates the finger pointing often found in self-integrated hardware solutions.

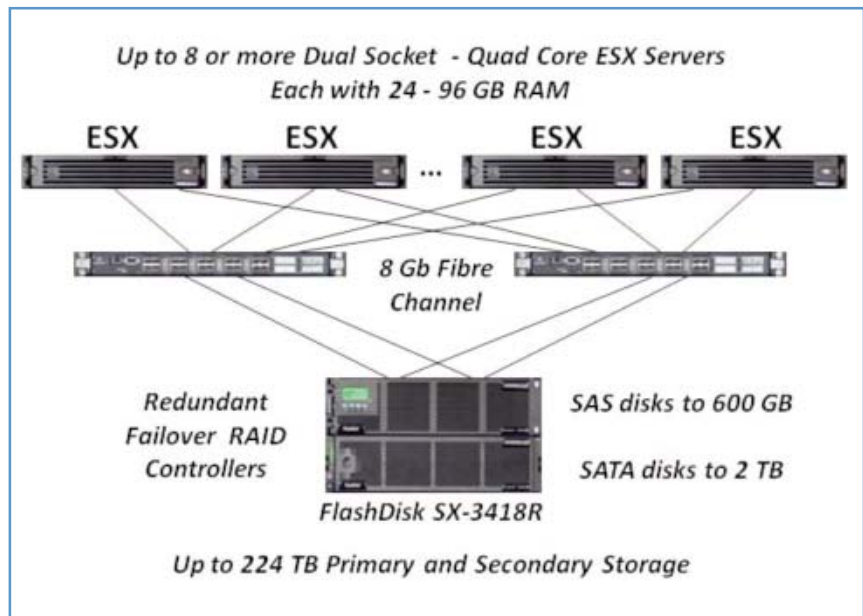

Shown here are eight EcoServers running ESX on eight cores each, a FlashDisk SX-3418R base unit and five expansion shelves. This *Large VMware Bundle* supports up to 192 virtual servers, with three virtual servers per processor, and up to 224 TB of storage with six expansion shelves. The *Large VMware Bundle* shown provides up to 208 TB of storage and fits exactly into a 42U cabinet including the two UPS, two fibre channel switches for storage connections and two ethernet switches for LAN connections.

Each EcoServer has eight processors with 24 GB RAM expandable to 96 GB. The FlashDisk SX-3418R disk array supports primary storage using high speed SAS drives with 10k and 15k rpm for demanding applications including database, OLTP, manufacturing and financial, plus secondary storage with high capacity SATA disks to 2 TB each for snapshots, archive, backup, disaster recovery and other bulk storage applications.

Finally, the total solution is simple, affordably priced - and ready to install.

Large VMware Bundle Configuration

The *Large VMware Bundle* is a complete and affordable VMware infrastructure available in a special EcoCabinet™ with high efficiency and eco-friendly servers, storage and UPS - and fits in four sq. ft.

This *Large VMware Bundle* is configured with eight affordable and reliable EcoServers to run ESX and supports 192 virtual servers and up to 224 TB of FlashDisk SAS and SATA storage.
