

Network Attached Storage (NAS)

RAID 15 FlashNAS

Key Benefits

- Very high data availability
- Protects against multiple drive failures
- Protects against multiple component failures
- Windows Common Interface File System (CIFS)
- Network File Systems (NFS) for UNIX
- Novell Netware (CNP)
- AppleTalk Protocol (AFP)
- Backup window reduced to zero
- Storage management

Key Features

- RAID 15, mirrored RAID 5 disk arrays
- Windows or Linux Powered NAS
- Up to 250 snapshots per volume Windows
- Up to 32 snapshots per volume Linux
- Set user disk quotas and generate reports about disk usage
- Recover lost/deleted files instantly from snapshot

Typical Applications

- File serving
- All applications that are not intensely performance oriented that run over the network
- Cost of downtime is high or prohibitive

Recommended Configurations

- Volume manager software within the NAS server would be used to create a mirror between the primary storage and the mirror storage
- Any disk drive size
