

Network Attached Storage (NAS) Cluster Server FlashNAS with Scalable Capacity

Key Benefits

- Protects against server, cable and HBA failures
- Windows Common Interface File System (CIFS)
- Network File Systems (NFS) for UNIX
- Novell Netware (CNP)
- AppleTalk Protocol (AFP)
- Backup window reduced to zero

Key Features

- Multiple servers connected to the same storage
- Servers are clustered using industry standard clustering software
- Servers communicate via heartbeat link
- Windows or Linux Powered NAS
- Up to 250 snapshots per volume Windows
- Up to 32 snapshots per volume Linux
- Recover lost/deleted files instantly from snapshot

Typical Applications

- File serving
- All applications that are not intensely performance oriented that run over the network

Recommended Configurations

- Two servers connected to one or more FlashDisk RAID arrays.
- Shared logical volumes
