

## Network Attached Storage (NAS) Scalable FlashNAS with Fibre Channel Switch

### Key Benefits

- SAN-ready, easily integrates into enterprise SAN
- Easily grow storage by “hot plugging” into Fibre Channel switch, no reboot or power down required
- Windows Common Interface File System (CIFS)
- Network File Systems (NFS) for UNIX
- Novell Netware (CNP)
- AppleTalk Protocol (AFP)
- Backup window reduced to zero

### Key Features

- Windows or Linux Powered NAS
- Up to 250 snapshots per volume Windows
- Up to 32 snapshots per volume Linux
- Set user disk quotas and generate reports about disk usage
- Recover lost/deleted files instantly from snapshot
- Fibre Channel storage architecture

### Typical Applications

- File serving
- All applications that are not intensely performance oriented that run over the network

### Recommended Configurations

- Any disk drive
- Any RAID configuration
- Any partitioning
